

Kojensi

The Secure Content and Collaboration Cloud Service for Government Classified Information

Connect. Create. Collaborate. Securely.

Collaboration

Share securely: Create, coauthor, discuss and edit documents, spreadsheets and presentations online with your colleagues

Enterprise Content

Discover more: Find and manage content faster and easier with enterprise content and records management

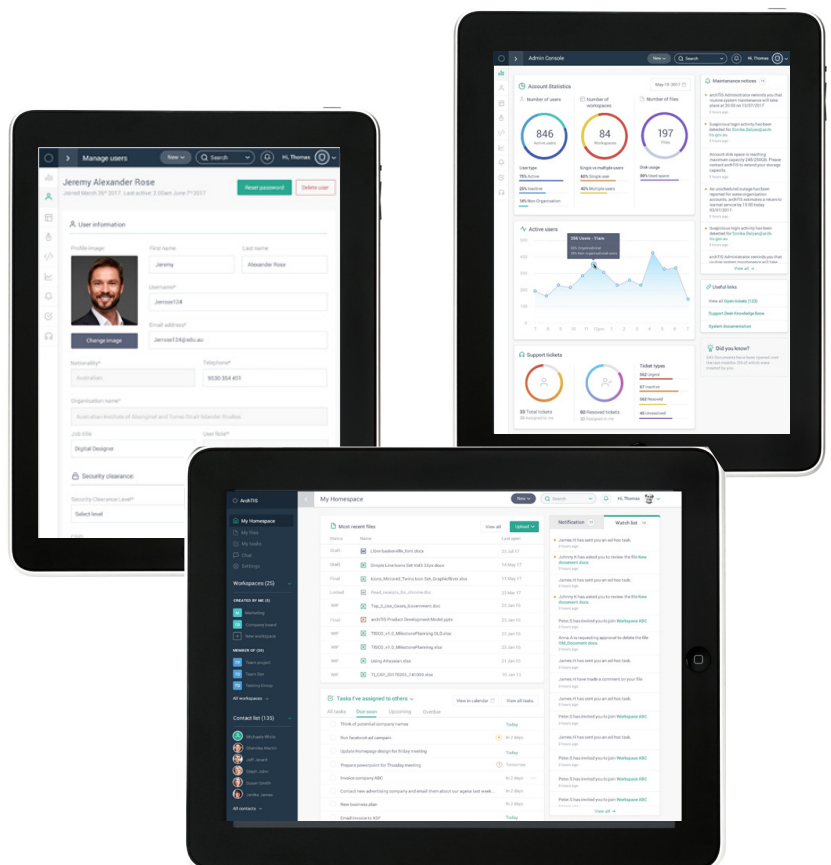

Workflow

Control business processes: Initiate and monitor reviews, approvals, disposal workflows and ad-hoc tasks

Kojensi is a secure content and collaboration cloud service tailored for the multi-level security information sharing and collaboration needs of Government.

Kojensi has a unique combination of enterprise content management capabilities, collaboration tools and workflows. Plus, our platform meets government-compliant data classification (PSPF), information management standards and security (ISM) requirements.

Hosted within an ASD-accredited PROTECTED cloud environment, and accessible via FEDLINK or ICON, Kojensi offers a low cost, low risk means for providing secure interagency collaboration spaces, increasing productivity, speeding decisions and business processes, and improving data classification awareness and accuracy.

Fully responsive user interface for desktop, tablet and mobile

Rapidly create, manage and work productively on information within an ASD-accredited PROTECTED cloud hosted environment.

Shared Group and Individual Workspaces

Online Editing & Coauthoring

Admin Dashboard Reporting & Monitoring

Automated Workflows for Approval and Disposal

Chat & Discussion Forums

Version Control & Promotion

Full Text Search Across Workspaces

Tasks & Calendar

Content Subscription & Activity Tracking

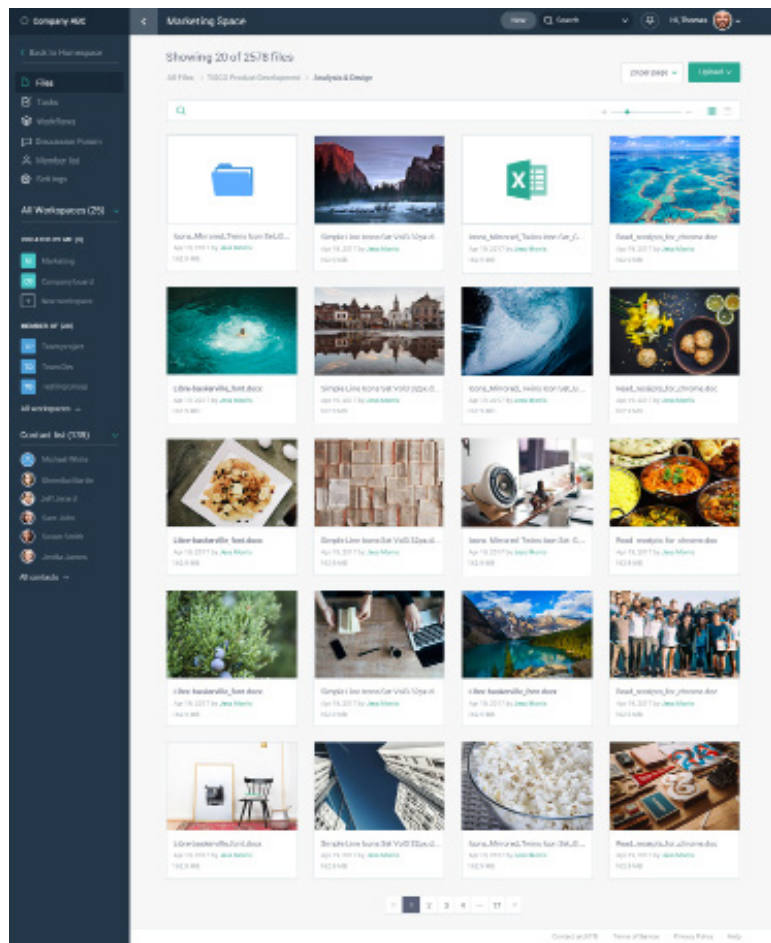

Government Grade Security & Auditing

KEY FEATURES	DESCRIPTION
Administration dashboards for contracts, accounts, and workspaces	Provides privileged users with access to account administration, contract management and workspace functionality 'at a glance'.
Multiple shared workspaces and individual user dashboards	Rapidly set up workspaces and define the terms and conditions of sharing for interagency collaboration or internal teams. Individual dashboards provide an immediate understanding of what's new and what has changed within the service since the user last logged on.
Online file creation and editing	Create, edit, save files directly within the service or upload files to the service for sharing.
Coauthoring with chat	Edit a document, spreadsheet or presentation simultaneously with colleagues and talk to each other using real-time chat.
Version control and file comments	View file version history, open or promote older versions. Record comments against a file version that are shared with all other authorised users
Broadcast messages, notifications and mentions	Privileged users and workspace owners can broadcast important announcements to users within the service account. All users can notify each other about information, comments or discussions that would be in their interest using @mention.
File activity tracking, reports, logs and audit trails	Record the full history of all changes made to files, workspaces and the service account including changes in file ownership, user access and security permissions.
Adhoc tasking and automated workflows	Assign tasks to yourself or others quickly and easily. Add deadlines and attach reference files and task descriptions. Initiate and monitor automated workflows such as publishing review, approval and archiving processes.
Full text, cross-workspace search	Locate information stored across your service account and be able to request access to information unavailable to you.
Discussion forums	Participate in threaded conversation forums that are unique to each shared workspace.
Watchlist	Subscription-based activity stream. Users can subscribe to or 'watch' content and receive notifications when it has been modified.
Policy creation and enforcement	Create and enforce policies for governing passwords, access, and security.

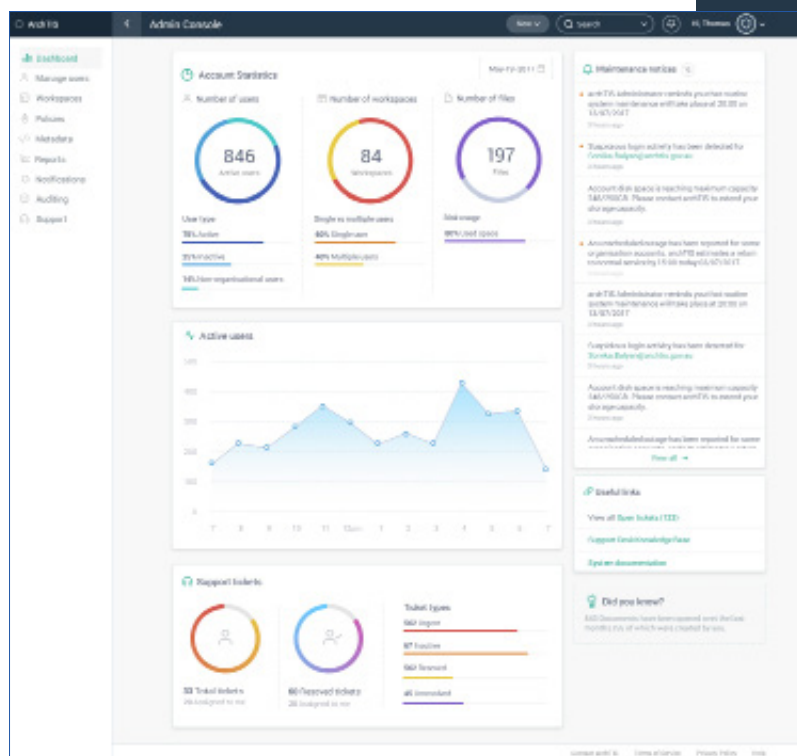

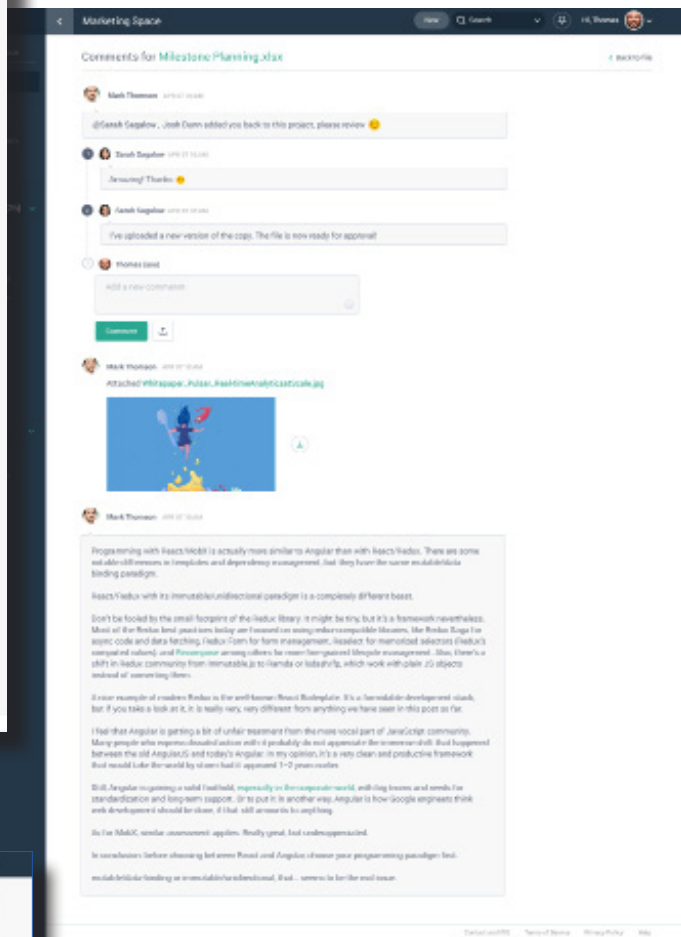

Scale up your security with Kojensi

Our cloud service is also available as a secure private cloud solution for handling Secret or Top Secret information

Locate your workspaces, files and folders easily using list or grid view

Attach reference files/URLs, write and respond to comments on a file

Use the Admin Console to control and dynamically manage your information, users, policies and workspaces
