

Let security be the enabler of collaboration

A secure content and collaboration platform for classified content.

Connect. Create.
Collaborate. **Securely.**

With an ever increasing amount of data and more threats to data security, it has never been more important for organisations to be proactive in ensuring their sensitive information stays safe. In an attempt to do so, most organisations add more layers of security, limiting collaboration and slowing productivity.

Kojensi Gov is a secure content and collaboration cloud service that enables government agencies to secure their data, whilst unlocking collaboration, promoting creativity and supercharging productivity. Agencies no longer need to add layers of security, which slow productivity and complicate processes. Agencies, and their partners, can create, edit and save documents in a secure space.

Kojensi Gov's unique benefit is its next generation security model. You can easily set access conditions on the content you have contributed to shared workspaces, and dynamically control whether other users can edit your information or discover it through search. Workspaces can be as open or as restrictive as necessary, giving you full control over your classified information.

Government Security and Compliance

Kojensi Gov meets stringent requirements by classifying data in accordance with the Protective Security Policy Framework (PSPF). Data is stored within an ASD-accredited PROTECTED cloud service provider and can be scaled to SECRET and above, in a private cloud.

Inter-agency Collaboration

Kojensi Gov gives your agency the secure platform to collaborate both within your agency and across agencies. Extensive file commenting, version control and discussion forums empower your agency and partners to increase productivity and collaboration.

Secure Online Editing

Kojensi Gov allows you to create and co-author documents inside the Kojensi Gov platform. Kojensi Gov ensures your information stays within the secure environment, accessible by authorised parties only.

Distributed Administration

Kojensi Gov enables team leads to set up shared workspaces and invite contractors and partners to collaborate. Security and sharing settings are set by the workspace owner to guide users in the appropriate classification of the content they contribute.

Scale up your security and collaboration with Kojensi Gov

Kojensi Gov is designed with security at its core to ensure it meets the stringent compliance and security guidelines and regulations set by the Australian Government.

PSPF

Kojensi Gov helps you meet your mandatory PSPF information security requirements out-of-the-box by enabling users to apply protective markings to new or uploaded files.

ISM

Hosted within an accredited PROTECTED cloud service provider, Kojensi Gov meets the stringent information security controls set out in the Australian Government's Information Security Manual (ISM).

Privacy Act

Kojensi Gov assists agencies in marking and managing private information, to better comply with the Australian National Privacy Principles and global data protection requirements.
