

Microsoft Purview Information Protection

Better protect your sensitive information—anytime, anywhere.

Microsoft Purview Information Protection helps customers protect their sensitive data – wherever it lives or travels. Microsoft Purview Information Protection enables you to discover, classify and label, protect and monitor sensitive information across a variety of locations including apps, devices, cloud services and on-premises repositories. You can customize your classification and labeling taxonomy to meet your specific needs, and apply a range of protection actions to your data based on its sensitivity – such as encryption, access restrictions, or visual markings. Microsoft Purview Information Protection helps you meet your internal security goals and external compliance requirements.

How NC Protect integrates with Microsoft Purview Information Protection for Dynamic Protection Against Data Loss & Insider Threats in M365 Apps

NC Protect from archTIS leverages key Microsoft Purview Information Protection extensibility capabilities to provide fine-grained, data-centric security for collaboration in Microsoft 365 applications including SharePoint, Teams, Exchange, OneDrive and Office. By combining Microsoft Purview Information Protection sensitivity labels with NC Protect's dynamic attribute-based access control (ABAC) and protection policies customers will benefit from expanded protection and control over information access, collaboration and sharing.

Customer Benefits

- Leverage sensitivity labels in combination with other content and user and attributes to apply ABAC policies to dynamically control access to and apply protection to files, chats and messages.
- Gain unique capabilities such as digital security watermarks for Office documents, PDFs and CAD files, a secure read-only viewer and dynamically hide sensitive files from unauthorized users.
- Apply CUI Designation Labels to meet CMMC, DFARS, NIST and ITAR requirements.
